Genomics Resources

ons.org/learning-libraries/precision-oncology

Biomarker Testing

Biomarker testing can identify germline and/or somatic variants. It is the use of laboratory tests to measure genes, proteins, and other substances (biomarkers) found in tissue, blood, or other body fluids.

SOMATIC VARIANT

A somatic cell is any cell of the body except sperm and egg cells. Somatic variants only affect the individual and are not passed on to offspring. For example, a common driver variant is lung cancer.

GERMLINE VARIANT

A germline variant occurs in a sperm cell or an egg cell. Germline variants can be passed on to offspring.
